# MOTION SENSING FUNCTION

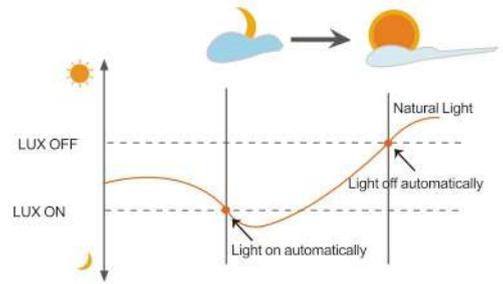

## Dusk/Dawn function

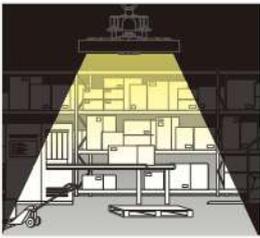

It can distinguish between artificial and natural light, automatically turning off when ambient brightness exceeds the preset lux level.

### Precondition of Dusk/Dawn function:

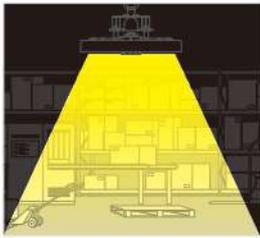

1. Standby period is +∞;
2. Standby dimming level is on 10%, 20% or 30%;
3. Daylight threshold is on 30lux/50lux/80lux/120lux

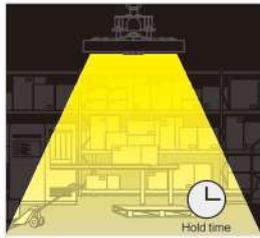

### 1. With Dusk/Dawn function

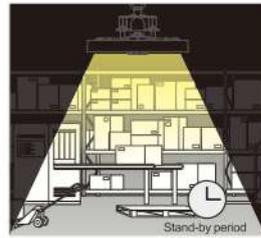

With insufficient ambient brightness, sensor turns on light and keeps it at standby dimming level even if there is no motion or presence.

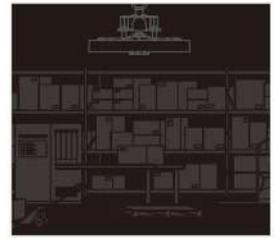

When sensor detects motion or presence it will bring the light level up to 100%.

After motion is no longer detected, fixture remains at 100% for hold time.

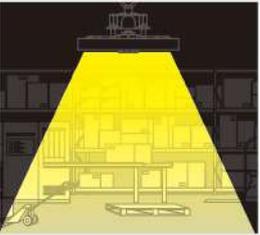

After pre-set hold time period it will dim light to standby dimming level again and always keep it.

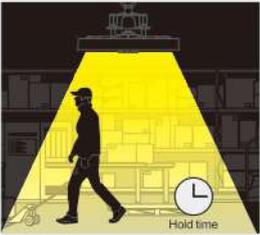

With sufficient ambient brightness, sensor will turn OFF light automatically.

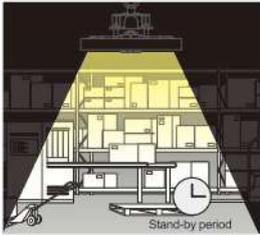

### 2. Without daylight disabled

Sensor turns ON light when motion is detected.

Sensor keeps for a hold time period after motion leaves

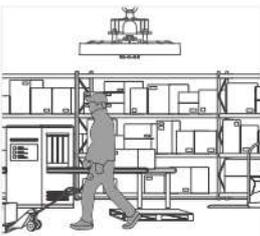

Sensor dims light to standby dimming level after hold time if there is still no motion

Sensor turns OFF light after standby period

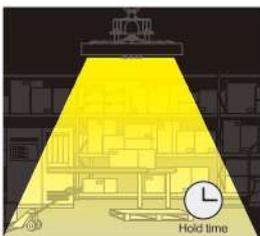

### 3. With Daylight Threshold

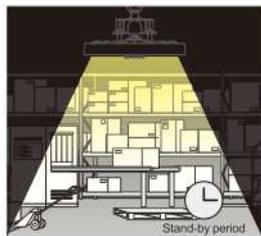

With sufficient daylight, the sensor keeps light OFF even motion gets detected

With insufficient daylight, the sensor turns light ON when motion gets detected

After there's no motion detected, the sensor keeps light ON 100% for holdtime.

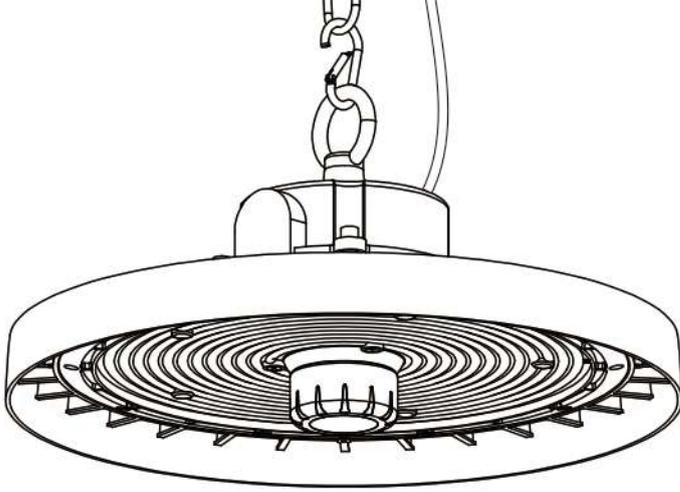

After holdtime, sensor dims light to standby dimming level for standby period.

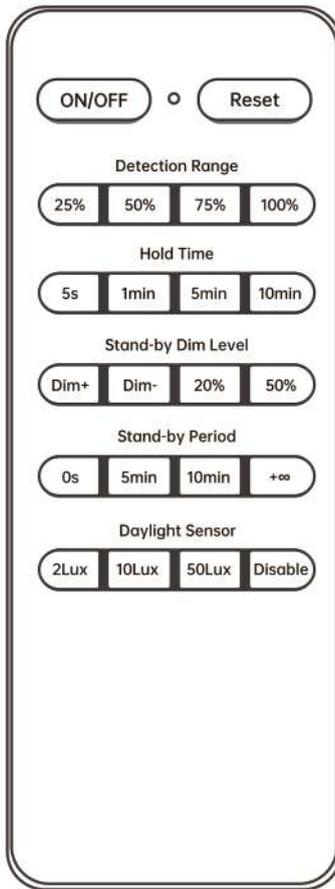

The sensor turns OFF light automatically after the standby period when there's no motion detected.

If the standby period has been set as 0s, sensor turns light OFF automatically after holdtime.
